

Scope 1 + Scope 2 Greenhouse Gas Emissions Report

Estimated organizational emissions inventory

Inventory Information

Field	Information
Company	Apple
Facility	Atlanta plant
Location	Atlanta
Reporting Year	2026
Organizational Boundary	Operational control
Activity Data Source	Fuel receipt

Emissions Summary

Category	Metric Tons CO2e
Scope 1 — Direct Emissions	24.38
Scope 2 — Purchased Electricity	18.5
Combined Scope 1 + Scope 2	42.88

Scope 1 — Direct Emissions

Emission Source	Activity Data	Emissions
Natural Gas	1,000 therms	5,310 kg CO2e
Gasoline	1,000 gallons	8,890 kg CO2e
Diesel	1,000 gallons	10,180 kg CO2e
Total Scope 1		24,380 kg CO2e

Scope 2 — Purchased Electricity

Field	Information
State	GA

Field	Information
Electricity Used	50,000 kWh
Electricity Factor	0.37 kg CO2e/kWh
Calculation Method	Location-based estimate
Scope 2 Emissions	18,500 kg CO2e
Scope 2 Total	18.5 metric tons CO2e

Calculation Methodology

Field	Information
Calculation Method	Activity data × emission factor
Scope 1 Factor Source	EPA GHG Emission Factors Hub
Scope 2 Factor Source	State-level electricity factor table (MVP estimate)
Scope 2 Method	Location-based estimate
Calculation Date	8/7/2026, 2:02:25 PM
Inventory Status	MVP estimate — not independently verified

Important Reporting Notice

This report is generated by an educational MVP and provides an estimated Scope 1 and Scope 2 greenhouse gas inventory. The Scope 1 calculation currently includes natural gas, gasoline, and diesel. The Scope 2 calculation currently uses a state-level location-based electricity factor. This report is not independently verified and does not yet include every emissions category, facility consolidation rule, uncertainty assessment, or framework-specific disclosure requirement. The inventory should be reviewed against the applicable reporting framework before official or regulatory use.
